Sequence 9, Application US/09401636

Patent No. 6913749;
GENERAL INFORMATION:
TITLE OF INVENTION: ENTRANCE

FILE REFERENCE: 10223/00601

CURRENT APPLICATION NUMBER: US/09/401,636

CURRENT PLING DATE: 1999-09-22

PRIOR PILING DATE: 1999-09-22

PRIOR PILING DATE: 1999-016,552

PRIOR FILING DATE: 1998-11-02

NUMBER OF SEQ ID NOS: 11

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 9

LENGTH: 341

TYPE: NOW:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-02-401-636-11

Sequence 11, Application US/09401636

Patent No. 6913749

GENERAL INFORMATION:
TITLE OF INVENTION: ENHANCED VACCINES
FITE REFERENCE: 10223/006001

CURRENT FILING DATE: 1999-09-22

PRIOR FILING DATE: 1999-09-22

NUMBER OF SEQ ID NOS: 11

SEQ ID NO 11

LENGTH: 341

TYPE: PRT

CREATING ATTE: 1999-11-02

NUMBER: OF SEQ ID NOS: 11

SEQ ID NO 11

CREATING BATE: 1998-11-02

NUMBER: OF SEQ ID NOS: 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Published Applications AA New:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Publication No. US20060150283A1
GENERAL INFORMATION:
APPLICANT: Brover, Vyacheslav
APPLICANT: Alexandrov, Nickolai
TITLE OF INVENTION: Sequence Determined DNA Fragments and Corresponding
TITLE OF INVENTION: Polypeptides Encoded Thereby
FILE REFERENCE: 2750-1590PUS2
CURRENT APPLICATION NUMBER: US/11/056,355B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Sequence 26705, Application US/10953349
Sequence 26705, Application No. US20060107345A1
GENERAL INFORMATION:
TELL INFORMATION:
TITLE OF INVENTION: SEQUENCE-DETERMINED DNA FRAGMENTS AND CORRESPONDING POLYPEPTIDES
TITLE OF INVENTION: ENCONDED THERBY
FILE REFERENCE: 2750-1579PUS2
CURRENT APPLICATION NUMBER: US/10/953,349
CURRENT FILING DATE: 2004-09-30
NUMBER OF SEQ ID NOS: 40252
SOFTWARE: Patentin version 3.3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 26553, Application US/11056355B
; Sequence 26553, Application WS/11056355B
